CAMPUS EVENTS MANAGEMENT SYSTEM

Python + Django + SQLite Project Report

Student Name: _____

Class: M.Sc. Computer Science

College: _____

1. Introduction

The Campus Events Management System is a simple web application developed using Python and Django. It allows college users to create, view, update and delete campus event records. SQLite is used as the database.

2. Objectives

• Manage college event records
• Demonstrate Django CRUD operations
• Store data in SQLite
• Provide a clean web interface
• Demonstrate REST API operations

3. Technologies Used

Python, Django, Django REST Framework, SQLite, HTML, CSS and JavaScript.

4. System Architecture

Frontend → Django Backend → SQLite Database
REST API → Django Backend → SQLite Database

5. CRUD Operations

Operation	Description
Create	Add a new campus event
Read	Display existing events
Update	Edit an existing event
Delete	Remove an event

6. Screenshots

Paste your screenshots in the spaces below before final submission.

Screenshot 1 — Home / Event List

PASTE SCREENSHOT HERE

Screenshot 2 — Create Event

PASTE SCREENSHOT HERE

Screenshot 3 — Update Event

PASTE SCREENSHOT HERE

Screenshot 4 — Delete / Event List After Delete

PASTE SCREENSHOT HERE

7. REST API

GET /api/events/ — Read all events
POST /api/events/ — Create an event
GET /api/events/<id>/ — Read one event
PUT /api/events/<id>/ — Update an event
DELETE /api/events/<id>/ — Delete an event

8. Conclusion

The project successfully demonstrates a functional Django-based Campus Events Management System with database integration and CRUD operations. The application is simple, maintainable and suitable for a college practical demonstration.
